

Applications Engineer/Estimator (Littleton, CO)

Setpoint Systems a 29-year-old, award-winning, rapidly growing system integrator of building control systems in the Western United States is looking for an Application Engineer/Estimator. As a member of our engineering team, you will be responsible for the design of temperature controls systems and related products for HVAC systems, engineering documentation, and providing technical support for Account Managers, Project Managers, and Field Technicians.

If you like a structured environment, are focused on quality, and enthusiastic, we want to see your resume.

Qualifications include a BS in Engineering preferred Mechanical or Electrical, 3 years experience working with HVAC and DDC controls, and experience designing systems using CAD software program.

We offer comprehensive product training, excellent compensation based on experience, a complete health, dental, vision, and disability benefits package, including 401(k) contribution matching, and generous paid time off.

Equal Opportunity Employer
