

Project Controls Technician (Littleton, CO)

A 29-year-old, award-winning, rapidly growing systems integrator of building control systems in the Rocky Mountain Region is seeking a number of Project Technicians, serving Colorado, Wyoming, Utah, New Mexico, Arizona, California, Oregon, Hawaii, Ohio, Minnesota, Virginia, and Kansas. As a member of a project team, you will be responsible for:

- reviewing drawings for functionality and adaptability
- verify installation meets code
- test terminations for correctness and identify any electrical faults
- verify proper installation and calibration
- commission each mechanical system
- provide customer training
- assist in documenting as-built drawings
- work with different communication protocols i.e. BACnet and Modbus
- work with Basic Programming Language

If you are focused, methodical, personable, helpful, and enjoy working in a structured team environment, we want to see your resume.

Qualifications include 2-4 years minimum experience with programming, commissioning, and servicing HVAC and Building Automation Systems, Electrical Power Monitoring systems for large commercial, industrial, and institutional customers.

We offer excellent compensation, a complete health, dental, vision, and disability benefits package, including 401(k) contribution matching, generous paid time off, and extensive 4 week training with on-going training. Some positions may require extensive travel outside Colorado.

Equal Opportunity Employer, M/F/D/V
